VMEETING IVR APPLICATIONS

INTERROGATION RECORDING

A police detective wants to review a suspect's response to a specific question. Since she entered the question in one of the custom data fields during the interview, all she needs to do is enter the question, and the specific video is retrieved.

SPORTS TEAM COACHING

A football coach wants to review a season's worth of a specific play. By entering the play name, all the video of that specific play is accessed.

HOSPITAL ADMINISTRATION

A hospital wishes to review the tape of a surgery for training purposes. The video, which was coded by procedure, date, patient and challenges, is instantly accessible for doctors to review.

MANUFACTURING

Finding out what went wrong in a manufacturing process may involve examining a specific process over a period of time. Easily compare processes over points in time.

CORPORATE COMMUNICATIONS

Training, product announcements, sales meetings can all be recorded and reviewed at any time, simply by entering the subject, date, or other custom information.

CAPTURE. CONTROL. ORGANIZE. SHARE

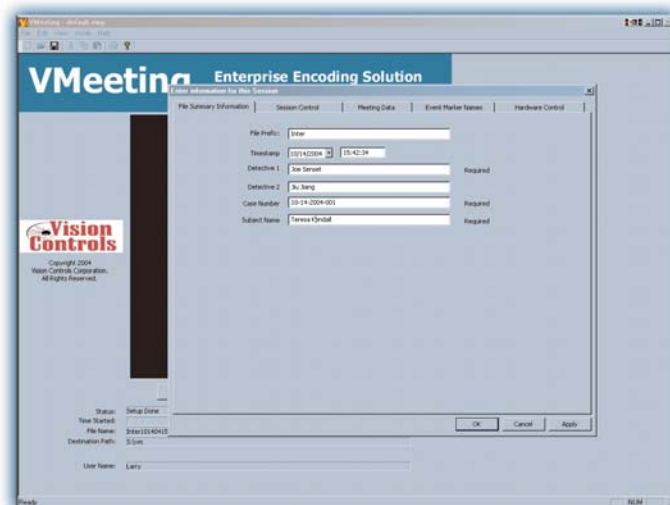

The Vision Controls **VMeeting IVR** is for customers who want an easy way to incorporate digital video into their business. The streaming-media VMeeting IVR and software with Smart Video Search allows digital encoding of any video signal, the ability to tag (label) video footage on the fly, and then search, sort and retrieve that video anytime.

FEATURES

- Easy to understand, VCR-like controls.
- Easy search engine - retrieve the files you need without time-consuming editing.
- Custom data fields with drop-down boxes.
- Real-time marker insertion.
- Scheduler feature - pre-program recording and broadcasting sessions.
- Remote control from any network PC.
- Windows Media 9-enabled. No proprietary software required!
- User-definable encoding rates, from DVD quality to 56K streaming-enabled.

It's easy

1. Plug your camera into the VMeeting workstation. Use the VCR-like controls on screen to operate the camera.
2. Tag your video while recording. User-defined fields make it easy!
3. Search and store video.
